Vista Canopy
Tensioning Guide

Method Statement

Vista Canopy Tensioning Guide

1. Using the supplied winding handle, hook on to the winding eye nut.
2. Wind in an anti-clock wise direction to add tension.
3. Continue to wind until canopy is reasonably taut.
4. Refer to the diagram below for the recommended tensioning measurement for the specific umbrella size.
5. Using an appropriate ladder, double check that the top plate to mid-cast dimension is correct.
6. It is important to not over-tension the canopy initially but over time you may have to gradually increase tension.
7. Ensure that the anti-creep latch is engaged while erected, failing to do so will leave the umbrella vulnerable to the wind.
